Learn webpack,

and sleep at night.

Outline

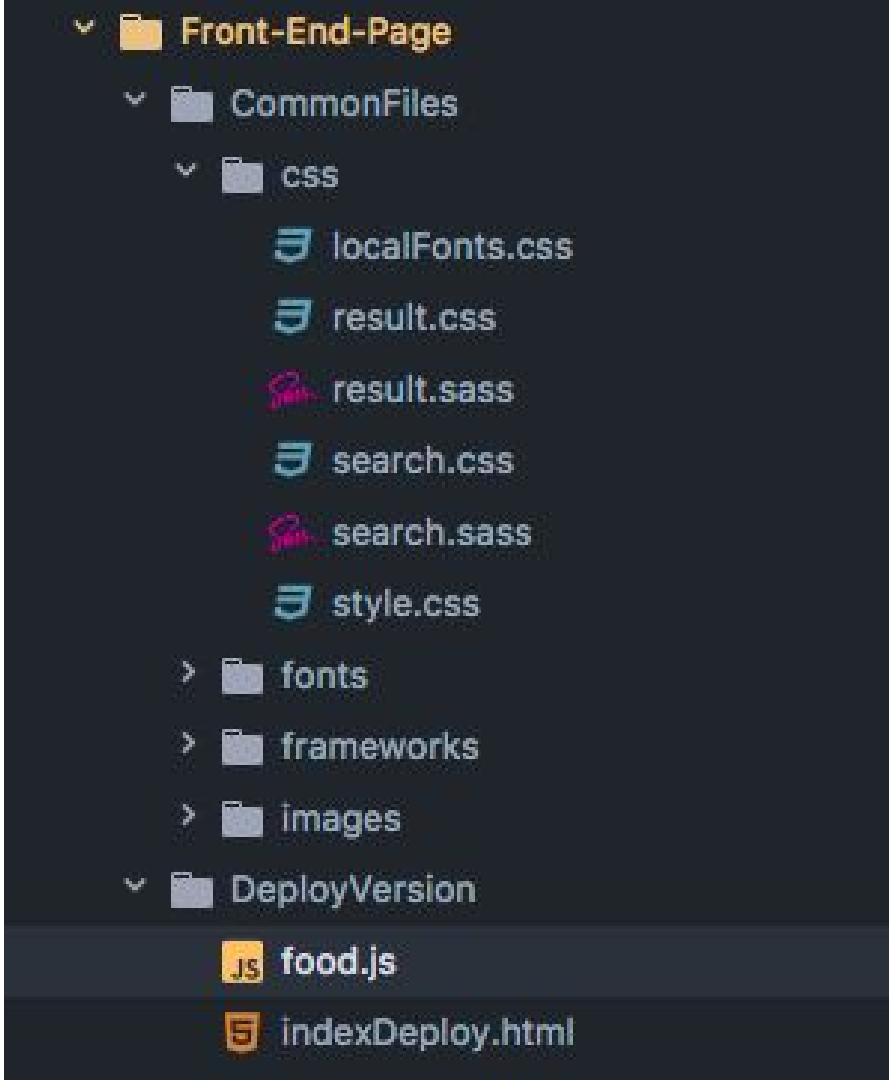
Feature#1 Modules

Feature#2 Task Runner

Feature#3 Project Builder

Web is growing

And My Code , too.



But We Still Use the Stone-Age way to build project.

```
function foo(){
    //...
}
function bar(){
    //...
}
```

```
var MYAPP = {
    foo: function(){},
    bar: function(){}
}

MYAPP.foo();
```

```
var Module = (function(){
    var _private = "safe now";
    var foo = function(){
        console.log(_private)
    }

    return {
        foo: foo
    }
})()

Module.foo();
Module._private; // undefined
```

Having Trouble Cooking Our Tag Soup

```
body
    script(src="zepto.js")
    script(src="jhash.js")
    script(src="fastClick.js")
    script(src="iScroll.js")
    script(src="underscore.js")
    script(src="handlebar.js")
    script(src="datacenter.js")
    script(src="deferred.js")
    script(src="util/wxbridge.js")
    script(src="util/login.js")
    script(src="util/base.js")
    script(src="util/city.js")
```

The 1st Problem

The current JS structure is doing too little.

We have already organized a good file structure.

Still have to write a lot of <script src="app1.js"></script> !

Other Programming Languages

C

```c
int foo( int x )
{
    return x + 5;
}
```

```c
#include "foo.c"

int main()
{
    int num = foo( 10 );
}
```

Python

```python
def foo():
    print('I am a module')
```

```python
import foo

foo.foo()
```

Say Hello to Webpack modules !

add.js

```
function add ( a , b ) {

    console.log( a + b );

}

exports.add = add;
```

app.js

```
var add_module = require('./add.js');

var num = add_module.add( 10 , 20 );

console.log( num );
```

Webpack Feature #1 Modules

1. no more globals , only import
2. no name conflicts , ever
3. you can just write one <script></script>
4. dependencies is not messy
5. supports the module ecosystem of npm

Second Problem

Too many
preprocessors/transpilers

RELEASE/indexDevelop.html 14:38 LF LiveReload: Off Normal UTF-8 HTML master +140 五月 17日, 星期三, 3:12 下午

Just use webpack

Just use webpack

And sleep at night...

Webpack feature#2 Task Runner(loader)

Manage and run all your preprocessor / transpilers

1. Add your SASS

entry.js

```
// SCSS as Modules
var style_scssModule = require('./style.scss');
```

2. Add a loader

```
rules: [
    {
        test: /\.scss/,
        use: [
            { loader: 'style-loader' },
            { loader: 'css-loader' },
            { loader: 'resolve-url-loader' },
            { loader: 'sass-loader?sourceMap' }
        ]
    },
```

```
AlxTz@AlxTzMac  IntegrateWorkflow(Webpack)/2. SCSS Transplie  steps  webpack
Hash: 7978cf1337d183810e5c
Version: webpack 2.5.1
Time: 758ms
                                Asset      Size  Chunks                    Chunk Names
                  assets/background.jpg  43.4 kB          [emitted]
                       assets/cat.jpeg  1.17 MB          [emitted]  [big]
assets/fonts/AlexBrush-Regular.ttf    49 kB          [emitted]
                            build.js    20 kB       0  [emitted]         main
   [0] ./Develop/style.scss 1.33 kB {0} [built]
   [1] ./Develop/entry.js 92 bytes {0} [built]
   [2] ./~/css-loader!/Users/AlxTz/~/resolve-url-loader!./~/sass-loader/lib/loader.
   [3] ./~/css-loader/lib/css-base.js 2.26 kB {0} [built]
   [4] ./Release/assets/background.jpg 67 bytes {0} [built]
   [5] ./Release/assets/cat.jpeg 61 bytes {0} [built]
   [6] ./Release/assets/fonts/AlexBrush-Regular.ttf 80 bytes {0} [built]
   [7] /Users/AlxTz/~/style-loader/addStyles.js 9.15 kB {0} [built]
   [8] /Users/AlxTz/~/style-loader/fixUrls.js 3.01 kB {0} [built]
AlxTz@AlxTzMac  IntegrateWorkflow(Webpack)/2. SCSS Transplie  steps •
```

SASS compiled !

Same as Babel !

1. Add babel-loader

```
rules: [
    {
        test: /\.js$/,
        use: [
            { loader: 'babel-loader', }
        ]
    },
```

2. Run webpack

```
[24] ./~/raw-loader!./~/babel-loader/lib?{"presets":["es2015"]}
     [] -> factory:778ms building:2019ms = 2797ms
```

Webpack feature#3 Builder(Bundler)

Build your Release Project !

1. Set build folder

```
entry: './Develop/entry.js',

output: {
    path: path.resolve(__dirname, 'Release'),
    filename: 'build.js'
},
```

2. Set image / font folder

```
{
    test: /\.(jpe?g|png|gif|svg)$/i,
    use: [
        { loader: "file-loader?name=[name].[ext]&outputPath=assets/images/" }
    ]
},
```

```
{
    test: /\.(eot|otf|ttf|woff|woff2)$/,
    use: [
        { loader: "file-loader?name=[name].[ext]&outputPath=assets/fonts/" }
    ]
},
```
